

# 400V Data Center Battery Cabinet Discount

## Overview

---

Why do data centers use 400V DC power?

Traditional data center AC to DC conversion stages. 400V DC power, in order to power IT equipment that inherently consumes DC power. By distributing 400V DC power to IT equipment, you can eliminate excess conversions between AC and DC [Figures 2 & 3]. The result is a more streamlined power.

What is 400V DC power?

Based on a flexible architecture, 400V DC power can be implemented at a wide variety of different telecom and data centers sites. Whether your site equipment powering needs include 400V DC, 48V DC, or AC power – or a combination of all three – 400V DC can be the backbone infrastructure of a cost effective and efficient site design.

How does the netsuretm 9500 400V DC power system work?

The NetSure™ 9500 400V DC power system converts AC power to 400V DC power. By distributing the power at a higher voltage, the current is cut by a factor of seven compared to 48V DC [Figure 1]. The result is an 80%+ savings for the material and labor required to distribute power across your core telecom site.

What is a 400V to 48V DC converter?

The NetSure 700 Series power system offers a 400V to 48V DC-DC converter system that enables 400V DC power to be converted to 48V DC near the equipment loads. This lets you use existing 48V DC equipment loads while gaining the copper-saving benefit of 400V DC power for the main distribution. your data center to 400V DC power to.
