Do data center and network room UPS systems use lead-acid batteries?

Although alternative energy storage technologies such as fuel cells, flywheels, lithium ion, and nickel cadmium batteries are being explored (see White Paper 65, Comparing Data Center Batteries, Flywheels, and Ultracapacitors for more details) data center and network room UPS systems almost exclusively utilize lead-acid batteries.

What is a lead-acid battery?

The lead-acid battery is the predominant choice for uninterruptible power supply (UPS) energy storage. Over 10 million UPSs are presently installed utilizing flooded, valve regulated lead acid (VRLA), and modular battery cartridge (MBC) systems. This paper discusses the advantages and disadvantages of these three lead-acid battery technologies.
