

5mw solar in tbilisi

Overview

Does Georgia have a solar power plant?

Our solar power plant has a rated power capacity of 40 MW and is expected to generate 58,916,000 kWh of electricity per year. Solar Energy. The Georgian government has shown strong support for the development of renewable energy in the country, offering favorable conditions and incentives for investors.

How much solar energy will Georgia generate by 2030?

The government has set a target of generating 50% of its energy from renewable sources by 2030, which includes a significant increase in the installation of large-scale solar energy plants. With more than 250 sunny days per year, the average annual solar insolation level is more than 1,800 kWh/m² in some climate zones of Georgia.

What is the average solar insolation level in Georgia?

With more than 250 sunny days per year, the average annual solar insolation level is more than 1,800 kWh/m² in some climate zones of Georgia. The country's strategic location at the crossroads of Europe and Asia provides access to a large and growing energy market.

Does Georgia have a solar project auction system?

Georgia has introduced a solar project auction system to incentivize private investment in large-scale solar energy plants. The government has set a target of generating 50% of its energy from renewable sources by 2030, which includes a significant increase in the installation of large-scale solar energy plants.
