

60kW Lead-acid Battery Cabinet for Data Center

Overview

Do data centers use lead-acid batteries?

Historically, most data centers depend on lead-acid batteries to power their UPS systems.

What is a lead-acid battery?

The lead-acid battery is the predominant choice for uninterruptible power supply (UPS) energy storage. Over 10 million UPSs are presently installed utilizing flooded, valve regulated lead acid (VRLA), and modular battery cartridge (MBC) systems. This paper discusses the advantages and disadvantages of these three lead-acid battery technologies.

Are lithium & lead batteries a good choice for data center applications?

There are promising developments for both lithium and lead battery technologies in data center applications. While lithium offers benefits such as higher energy density, less floor space, and reduced overall system weight, lead technology is a proven, safe, and sustainable solution.

What is a battery cabinet / rack?

EverExceed designs customized battery cabinets / racks for individual batteries. The cabinet or racking system can be specified to accommodate any battery cell. From flooded to sealed, from lead acid to nickel cadmium and from vertical to horizontal all kinds of battery cabinet / rack can be designed flexibly to save the space in battery room.
