

Battery energy storage projects in southern europe

Overview

The next decade, running from 2025 through 2035, will define whether Southeast Europe becomes a flexible, renewable-anchored, price-stabilised regional power ecosystem or whether it continues struggling through volatility and fossil dependence. The decisive factor is battery .

The next decade, running from 2025 through 2035, will define whether Southeast Europe becomes a flexible, renewable-anchored, price-stabilised regional power ecosystem or whether it continues struggling through volatility and fossil dependence. The decisive factor is battery .

MUNICH, Germany (Wednesday 7th May 2025): New analysis reveals another year of record installations for European* battery storage, despite slower year-on-year growth, according to the latest European Market Outlook for Battery Storage. 15% growth. Battery storage forecast. Drivers for battery.

The European battery storage market grew by 15% in 2024, reaching 61.1 GWh of installed capacity. SolarPower Europe warns that, despite projecting to reach 400 GWh by 2029, the region needs at least 780 GWh to meet its energy flexibility goals. Battery storage is no longer an optional add-on—it has.

Battery energy storage systems have shifted from speculative conversation to structural necessity in Southeast Europe. The question is no longer whether battery storage will become central to the region's electricity systems, but how quickly it will scale, how deeply it will influence price.

A new interactive platform delivers real-time clean energy storage insights as Europe shifts toward sustainable energy sources. Energy storage helps to balance supply and demand. The European Energy Storage Inventory is the first of its kind at European level to show all forms of clean energy.

The Battery Storage Europe Platform brings together industry leaders representing the battery storage value chain to advance the business case and regulatory frameworks for battery storage across the EU. Together, we urge a tenfold increase in battery storage by 2030 to ensure Europe's energy.

According to the latest analysis from SolarPower Europe, Europe added 17.2 GWh

of new battery energy storage capacity in 2023, a 94% increase over the previous year, marking the third consecutive year of the market roughly doubling. This brought the total installed battery storage fleet to around.
