

Beirut solar battery cabinet production

Overview

Does Lebanon need solar power?

Lebanon has a target to source 30% of its electricity from renewables by 2030. However, some argue that LCEC and Lebanon's government have played little role in the rollout of solar in the country.

Are rooftop solar panels a good idea for Lebanon?

Rooftop solar panels are offering the promise of a more normal way of living in Lebanon amidst an unsteady electricity supply – for those who can afford it.

How much solar power will Lebanon have in 2022?

Over 650 megawatts (MW) were installed in 2022 alone, says El-Khoury, bringing Lebanon's total solar capacity to 870MW, according to his figures. "Installed capacity should reach 1,000MW in June ," he says. He estimates that the installed capacity of diesel generators, meanwhile, likely amounts to 1,000-1,500MW.

What happened to electricity in Lebanon in 2021?

The state provider, Electricity of Lebanon (EDL), ceased supplying power altogether in 2021, when it ran out of fuel, plunging the country into near total blackouts. In Beirut, the blackouts continued for over a year and a half, with EDL only able to provide electricity for an average of 3-4 hours per day.
