## Overview

Use potassium-based compounds (e.g.,  $K_2CO_3$ ) to chemically disrupt flames and suppress thermal runaway propagation. Third-party validated: DNV and PVEL testing confirmed effectiveness in full-scale UL 9540A scenarios, limiting fire spread and maintaining agent concentration.

Battery energy storage is revolutionizing power grids, but fire safety remains a critical challenge. Advanced fire detection and suppression technologies, including immersion cooling, are making BESS safer by preventing thermal runaway and minimizing risks. Learn how EticaAG's innovative approach.

The scope of this document covers the fire safety aspects of lithium-ion (Li-ion) batteries and Energy Storage Systems (ESS) in industrial and commercial applications with the primary focus on active fire protection. An overview is provided of land and marine standards, rules, and guidelines.

BESS are complex assemblies that store electrical energy in a chemical form, typically using lithium-ion batteries. These systems play a key role in stabilizing the electrical grid, storing excess energy during low demand, and releasing it during peak times. Despite their benefits, the chemical.

Today, lithium-ion battery energy storage systems (BESS) have proven to be the most effective type and, as a result, installations are growing fast. Stationary lithium-ion battery energy storage "thermal runaway," occurs. By leveraging patented systems - a manageable fire risk dual-wavelength.

Modern systems prioritize early detection and intervention using gas sensors to identify off-gassing before smoke or flames appear, enabling power shutdowns and cooling measures to delay thermal runaway. Integrated suppression systems now combine detection, power isolation, and suppression to.

Thermal runaway releases highly flammable gases and oxygen, which can

accumulate and cause intense fires or powerful explosions within confined battery enclosures. The dense packing of cells and continuous oxygen generation make conventional fire suppression challenging and less effective. Many.
