

# Chile Data Center Battery Cabinet Wide Temperature Range

## Overview

---

What is a good temperature range for a data center?

There is a significant difference between the recommended and allowable temperature ranges. Most data centers maintain a cooler operating temperature. Although it can be theoretically allowable for Class A1 to operate at temperatures as high as 32 degrees C (89.6 degrees F), keeping server rooms at such high temperatures is generally frowned upon.

Why is temperature and humidity important in a data center?

Maintaining the proper temperature and humidity levels in a data center is critical for any organization with an on-premises IT environment. Data center hardware is designed to operate within specific temperature and humidity ranges; exceeding these can potentially damage equipment and even void its warranty.

What is the relative humidity level in a data center?

The relative humidity level ranges from 8% to 80% for Class A1 and from 8% to 90% for Class A4. It can be challenging to regulate temperature and humidity in large data centers, like this Google data center in Douglas County, Ga. There are countless devices available to monitor temperature and humidity.

Can a data center operate at a high temperature?

Most data centers maintain a cooler operating temperature. Although it can be theoretically allowable for Class A1 to operate at temperatures as high as 32 degrees C (89.6 degrees F), keeping server rooms at such high temperatures is generally frowned upon. Few, if any, real-world data centers are kept so warm.
