

# Costa rica energy solar-powered communication cabinet wind power hybrid power source

## Overview

---

Is solar power a new energy source in Costa Rica?

Like wind power, solar power is another newer energy source in the country. The first solar power projects in the country were established in 1978 by just a few researchers from public universities at the Solar Power Laboratory at the National University. During 2012, Costa Rica inaugurated the Miravalles Solar Plant next to the Miravalles Volcano.

Can solar power diversify the energy mix in Costa Rica?

While hydroelectric power dominates the energy mix at approximately 80% of electricity production, solar energy, though currently a smaller contributor, holds significant potential to diversify and stabilize the grid. This paper investigates Costa Rica's renewable energy journey, emphasizing solar power's evolving role.

Is Costa Rica a leader in solar energy in Central America?

Research by the International Renewable Energy Agency (IRENA, 2020) identifies Costa Rica as a potential leader in solar energy within Central America, given its high solar potential averaging 4.5-5.5 kWh/m<sup>2</sup>/day, yet notes that policy incentives lag behind those for other renewables.

How is Costa Rica transforming its energy portfolio?

Costa Rica is taking bold steps to diversify its energy portfolio. The country is integrating wind, solar, and geothermal solutions to strengthen its power grid. These efforts aim to reduce reliance on any single source and ensure long-term sustainability.
