

Generator cabinet set rain protection

Overview

How can you protect a portable generator from rain?

One option for using a portable generator in the rain is to set up a dedicated wet weather cover. This is essentially a mini-tent for the generator. Another option is to design a cover that allows the unit to have enough airflow to not choke the engine or cause the unit to overheat.

Do I need a cover for my Generator in the rain?

If you plan on using your generator in the rain, a proper cover is non-negotiable. Whether you go with a purpose-built tent or build your own enclosure, protecting the engine and outlets from moisture is what keeps you—and your generator—alive.

How do you refuel a generator without removing the cover?

Simply flip open the top cover to quickly refuel without removing the entire generator cover. Quick access to the power panel, with triple-layer waterproof tarpaulin for all-weather protection. Provide optimal ventilation and heat dissipation by hanging the side flaps at the top. Move the generator easily without removing the cover.
