Hydropower is the main energy source in Costa Rica, generating over 70% of the country's electricity. Dams and hydroelectric plants capture the energy from rivers, converting it into electricity. Large-scale projects like the Reventazón Hydroelectric Plant, which began operating in 2016.

Costa Rica has emerged as a global leader in renewable energy, achieving near-100% renewable electricity generation primarily through a mix of hydroelectric, geothermal, wind, and solar power. This article explores Costa Rica's journey toward renewable energy dominance, with a particular focus on.

Did you know that in 2022, over 98% of the electricity in Costa Rica came from clean sources?

This small country has become a global leader in sustainability, proving that a green future is possible. For years, Costa Rica has relied on diverse energy sources like hydroelectric power, wind, and.

The country has over 3,500 active systems and nearly 100 MW of installed capacity, almost entirely from rooftop solar. The 2021 Distributed Energy Law (Law 10086) provides a strong legal framework for self-generation, grid interconnection, and net billing, positioning the country as a regional.

Costa Rica's abundant renewable energy resources can supply all required energy across all sectors, including increased electricity demand for electric vehicles. Utilising about 6% of total solar power potential and 25% of Rica's wind power potential would suffice to supply enough energy to do so.
