Abstract - In this research article, a coordination method for Battery energy storage system (BESS) and ultra-capacitor is proposed for a Solar PV integrated ship power system. The key challenges in shipping industries include the fuels price rise, CO2 emission, source generators operated below.

Wattlab has installed a PV system capable of delivering up to 35 kW to a cargo ship's high-voltage propulsion system, allowing it to temporarily replace one of four diesel generators under optimal conditions. From pv magazine Germany A PV system has gone into operation on a new cargo ship developed.

LZY offers large, compact, transportable, and rapidly deployable solar storage containers for reliable energy anywhere. LZY mobile solar systems integrate foldable, high-efficiency panels into standard shipping containers to generate electricity through rapid deployment generating 20-200 kWp solar.

Although shipping is the most carbon-efficient mode of freight transport on a per tonne-kilometre basis, the sheer size of global trade results in a significant environmental impact. To achieve meaningful emissions reductions - the sector is currently responsible for approximately 3% of global.

Solar photovoltaic (PV) panels and Battery Energy Storage Systems (BESS) are a great opportunity to achieve decarbonization goals, as well as overall ESG goals for this vital industry. These technologies are able to reshape how energy is generated and consumed both at sea and in ports. But beyond.
