

# How much electricity can 400 watts of solar energy generate in one hour

## Overview

---

How much energy does a 400 watt solar panel produce?

A 400-watt panel can generate roughly 1.6–2.5 kWh of energy per day, depending on local sunlight. To cover the average U.S. household's 900 kWh/month consumption, you typically need 12–18 panels. Output depends on sun hours, roof direction, panel technology, shading, temperature and age.

How much power does a solar panel produce per hour?

The most popular residential solar panels installed today have an output of 400 watts of power per hour in ideal conditions. Power is a measurement of the amount of electricity being generated at any given time and is measured in watts. Here are the power ratings offered by some of the best solar panels on the market:

Can a 400 watt solar panel power a home?

Powering an entire home with 400-watt solar panels is possible, but it requires careful planning and sufficient panels to meet your energy demands. The average U.S. household uses 29 to 30 kilowatt-hours (kWh) of electricity per day.

How many solar panels per day?

Find your local peak sun hours (consult a solar map or use an estimate). For example, if you use 30 kWh per day, have 4.5 sun hours and plan to install 400 W panels:  $400 \text{ W} \times 4.5 = 1,800 \text{ Wh}$  (1.8 kWh) per panel per day.  $30 \text{ kWh} \div 1.8 \text{ kWh} \approx 17$  panels.
