

# How to connect the power supply of the energy storage cabinet fire protection system

## Overview

---

Can I provide power via a stored-energy emergency power supply system (sepss)?

Instead of providing two separate power supplies, you are permitted to provide power via a Stored-Energy Emergency Power Supply System (SEPSS) otherwise known as an Energy Storage System (ESS) or an Uninterruptible Power Supply (UPS). The SEPSS must be configured in accordance with NFPA 111 and provide 24 hours of backup battery.

Why do energy storage cabinets use STS?

STS can complete power switching within milliseconds to ensure the continuity and reliability of power supply. In the design of energy storage cabinets, STS is usually used in the following scenarios: Power switching: When the power grid loses power or fails, quickly switch to the energy storage system to provide power.

What is energy storage cabinet?

Energy Storage Cabinet is a vital part of modern energy management system, especially when storing and dispatching energy between renewable energy (such as solar energy and wind energy) and power grid.

What is a fire alarm power supply?

The power supply provides the fire alarm control panel, and by extension, all of its connected parts with energy. According to the NFPA 110, Standard for Emergency and Standby Power Systems, all fire alarm systems require a primary power source, along with a secondary source in the event of a power failure.
