

# How to install solar collector cabinet

## Overview

---

How do I install a solar water heating system?

Before installing a solar water heating system, the direction, angle and location of the solar collector on the house must be determined. The most fundamental requirement is exposing the solar collector to the most sunlight possible each day and throughout the year.

Do solar thermal collectors need to face the Sun?

Solar thermal collectors need to face the sun to obtain maximum sunlight exposure. The installation angle should be equal to or up to 15° or higher than the latitude of the location. This angle ensures optimal heat output throughout the year.

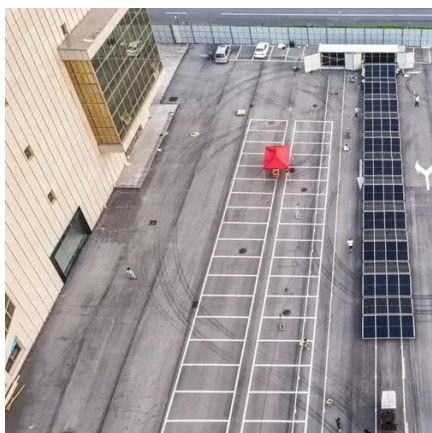

Which direction should a solar collector face?

Solar collectors should face as close as possible to the equator, which is the direction of the midday sun. Based on needing to face the equator, this means that in the northern hemisphere the collector should face south, in the southern hemisphere the collector should face north.
