

# Huawei vaduz gravity energy storage project

## Overview

---

What is Energy Vault EVX gravity-energy storage system (GESS)?

Energy Vault has connected its 25 MW/100 MWh EVx gravity-energy storage system (GESS) in China. Once provincial and state approvals are obtained to start operating, it will become the world's first commercial, utility-scale, non-pumped hydro GESS.

What is Energy Vault doing now?

It also revealed that the concrete foundations have been completed for the firm's first gravity storage project in the US, in Georgia with Enel Green Power. Energy Vault now provides a range of energy storage solutions including battery storage and green hydrogen and is forecasting for US\$325-425 million in revenues this year.

Can a gravity-based storage system be built anywhere?

The firm's only gravity-based storage system does not rely on land topography or geology and "thus can be built almost anywhere either co-located with solar or wind plants or simply connected to the grid to support dispatchability and grid stability," according to a statement by the firm.

How does gravity energy storage work?

Gravitricity develops below ground gravity energy storage systems and raised £40 million to commercialise projects in January this year, as covered by our sister site Solar Power Portal. The firm's technology works by raising weights in a deep shaft and releasing them when energy is required.
