

Investment in a 100kW IP65 photovoltaic battery cabinet for aquaculture

Overview

Can solar power help kelp farming and salmon aquaculture in Norway?

Ocean Farming in Norway: Kelp farming and salmon aquaculture in Norway have integrated solar power to reduce operational costs and environmental impact. By powering water circulation and monitoring systems with solar energy, these farms have achieved greater energy independence and sustainability.

How can solar power be integrated into aquaculture operations?

Solar power can be integrated into aquaculture operations in several ways:
Powering Equipment: Solar panels can directly power equipment used in aquaculture, such as pumps for water circulation and aeration systems.

Should aquaculture use solar power?

Integrating solar power into aquaculture presents many benefits, including reducing the industry's carbon footprint and minimizing environmental pollution. Economically, adopting solar energy lowers operational costs, qualifies for government incentives, and enhances overall efficiency in aquaculture operations.
