## Overview

---

Do Portuguese Li resources support Li-ion battery needs?

The growth of BEV production is leading to increased demand for lithium (Li), which will sharply rise in the following decades unless affordable alternatives emerge. We evaluate this demand surge and the role of Portuguese Li resources in supporting Li-ion battery needs for Portugal and the European Union (EU) BEV market.

Should Portugal produce battery-grade lithium compounds?

Therefore, the production of battery-grade Li- compounds in Portugal would aid the EU in lessening its dependence on external sources for this strategic metal, assisting as well in increasing the domestic supply of raw materials for battery manufacturing. Portugal has been the sole European lithium producer since 2011 (USGS 2024).

Does Portugal have a battery value chain?

However, according to current investments foreseen in the battery value chain in the EU, Portugal only appears identified at the level of exploration and processing of Li and not in the development of materials for batteries.

How much lithium does Portugal have?

Portugal has noteworthy lithium (Li) resources (306 thousand tonnes – kt) that should be suitably assessed to realistically support an expected expansion of known reserves (ca. 53 kt Li), as reported in several studies (e.g. Dinis and Horgan 2018; Filipe et al. 2010).

## Is the energy storage rate of lithium batteries in porto portugal low

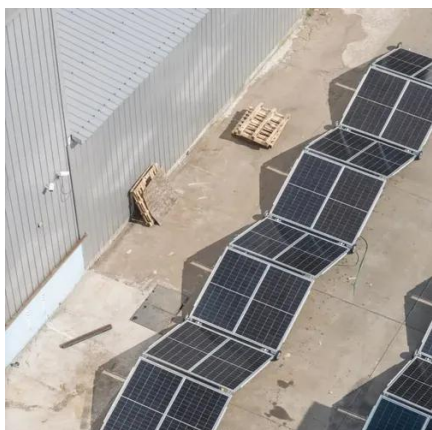

[Full article: Lithium resources and electric mobility in Portugal](#)

ABSTRACT Global interest is being given to battery electric vehicles (BEVs), key in transitioning to a low-carbon economy. The growth of BEV production is leading to increased ...
