

# Lithium iron phosphate stacked solar battery cabinet

## Overview

---

How long does a lithium iron phosphate battery last?

Each 9.6 kWh lithium iron phosphate (LFP) battery is designed for long-lasting performance with 8,000 cycles and a 20-year design life, making it ideal for residential and light commercial applications.

What is a HomeGrid stack battery?

The HomeGrid Stack'd Series battery is the ultimate storage solution for residential and small commercial projects.

Why do I need a stack'd series battery?

This is because the Stack'd Series battery is the only battery on the market that outputs enough power from a single unit for the Sol-Ark 15K. This busbar pair can be placed on the 15K battery landings to easily connect the battery cables (single + and single -) and maximize the system output.

How many battery modules does a stack have?

Modularity: Each white battery module is 4.8 kWh and each Stack can support 2-8 modules. This Lego-like form factor means a <30 min installation, and it's the easiest battery to upgrade in the future. No wiring between modules, and no conduit/wiring needed when it comes time to upgrade.
