

Magada off-grid solar cabinet-based mobile platform for oil platforms

Overview

Can offshore oil & gas platforms be electrified?

Offshore Oil & Gas platforms can be electrified with renewable energy powered by either fixed-bottom offshore wind turbines or floating wind turbines. Again, Norway is leading the way with the world's largest floating wind farm, which recently generated its first power.

What is a self-storing solar power system?

This process allows us to provide solar power solutions with quick turnaround and short lead times from inception to installation. This collapsible, self-storing systems was a collaborative effort between our engineering design team and engineers from one of our oil services customers. Self-storing solar power systems ready for transport.

What are off-gasses & how can they be used?

Gasses associated with oil production (known as "off-gasses") or gas extraction, can be recovered to avoid release into the atmosphere, and used to power gas generators. This solution is particularly well suited to the needs of the oil and gas sector in producing emergency energy and guaranteeing a continuous supply.

Why should oil & gas platforms be used?

Using floating platforms also opens up the possibility to place more platforms and wind farms to increase the amount of as-needed power. A major part of Greenhouse gas emissions on Oil & Gas platforms comes from the use of gas turbines.
