

Manila microgrid energy storage power station

Overview

How many microgrids are there in the Philippines?

The Philippines Department of Energy (DOE) has awarded contracts for eight microgrids in unserved areas, including hybrid systems with solar and energy storage, as well as diesel gensets. Plans are now underway for a second competitive bidding round to develop microgrids in other areas without electricity access.

Where will Hybrid microgrids be built in the Philippines?

A consortium of three companies will build the hybrid microgrids in three off-grid areas of the country. A remote area in the Philippine province of Palawan. (Source: Sean Hsu / Shutterstock.com) Nearly 4 million Filipino households are either unserved or underserved by the nation's power grid.

Are microgrids a good idea in the Philippines?

Microgrids are relatively new to the Philippines. Gaining of technical expertise and experience has just started. Economies of scale, particularly for battery storage, must be achieved in order to bring down the overall cost. Benchmarking with other Microgrid developers from other countries will help increase know-how.

Are off grid electrification systems sustainable in the Philippines?

In the Philippines, most of the existing off grid electrification which are not under SPUG and QTP schemes, are not sustainable. Generation systems, such as diesel generators or small solar home systems, usually fail after a few years of operation due to poor product quality or lack of maintenance.
