

New energy storage all-solid-state battery

Overview

Key Points: On December 31, 2025, Sodium Technology announced that its large-format all-solid-state sodium-ion battery cells with capacities above 25 Ah achieved an energy density of 348.5 Wh/kg, certified by the China Automotive Technology and Research Center.

Donut Labs and partner Verge Motorcycles claim they've got the world's first all-solid-state battery in a production vehicle, with many more to come. Solid-state battery technology is something of a holy grail for electric vehicle engineers. Your next electric vehicle could be cheaper, safer and a.

Now Donut Lab is proud to introduce the world's first solid-state battery that is ready for use in OEM vehicle manufacturing. Donut Lab solid-state batteries will be placed immediately on the road, powering Verge Motorcycles' current lineup, including the Verge TS Pro and Ultra. "While the.

A new partnership in battery manufacturing could help push electric vehicles closer to a long-promised breakthrough — and make EVs more practical, affordable, and appealing for everyday drivers. Electrek reported that U.S.-based Factorial Energy and South Korea's POSCO announced a collaboration at.

Finnish technology company Donut Lab has unveiled a solid-state battery that is now available for OEM use and will be deployed in all 2026 models of Verge Motorcycles' motorcycles starting from the first quarter of 2026. The solid-state battery can be charged in five minutes. Initially founded as a.

This battery type replaces the liquid inside a normal lithium-ion battery with a solid material. This makes batteries safer, more powerful, and more durable. A new variation uses silver in the battery. Silver improves performance and may play a major role in the future of electric vehicles (EVs).

On December 31, 2025, Sodium Technology announced that its large-format

(above 25 Ah) all-solid-state sodium-ion battery cell achieved an energy density of 348.5 Wh/kg, certified by the China Automotive Technology and Research Center. The battery utilizes a "high-specific-energy layered oxide.
