

Open the portable solar power bank

Overview

What are the best solar power banks?

I've tested the top solar power banks, and standout models include the SOARAISE 25000mAh with 15W wireless charging and four solar panels for simultaneous device charging, plus the massive 50000mAh Portable Charger featuring PD30W fast charging.

Can a power bank be used as a portable battery?

Ideally, you could pair a high-performing power bank with a high-quality solar charger or solar panel kit. That way, you can have power at your home and then take a portable battery with you when travelling in nature, keeping the device's solar panel in the sunlight to help keep the charge up.

Should you use a portable solar power bank?

A dead device is deadweight when an electrical outlet is nowhere in sight, which is when a portable solar power bank comes in handy. It can keep your gadgets powered up when you're enjoying life off-grid — perfect for camping, backpacking, traveling, or emergencies. We've tested over 100 different portable solar chargers since 2013.

Should I charge my solar power bank at home?

This is especially true if you're not going to have access to the grid where you're camping. If you're going with a solar power bank rather than a portable solar charger, I would recommend fully charging the power bank at home with a wall outlet first and then using the built-in solar panel to help keep the battery topped up on your trip.
