

# Roman solar cycle system

## Overview

---

Who invented the Roman calendar?

According to legend, Romulus, the founder of Rome, instituted the calendar in about 738 bc. This dating system, however, was probably a product of evolution from the Greek lunar calendar, which in turn was derived from the Babylonian. The original Roman calendar appears to have consisted only of 10 months and of a year of 304 days.

What are some interesting facts about ancient Rome astronomy?

Go on reading to learn about some interesting facts about the Ancient Rome astronomy. Ancient Romans distinguished seven planets, ordered but Ptolemy in the following way: the Moon, Mercury, Venus, the Sun, Mars, Jupiter, and Saturn.

How did Roman astronomy work?

Roman astronomy was largely practical, focusing on the calendar and timekeeping for agricultural, civic, and religious purposes. The Antikythera mechanism was an analog computer from 150–100 BCE designed to calculate the positions of astronomical objects. Credits: Marsyas, CC BY 2.5

When did the Roman calendar become Gregorian calendar?

The old Roman Calendar was eventually replaced in 45 BCE by the Julian Calendar. Julius Caesar was advised by the Astronomer Sosigenes at Alexandria to abandon the lunar year in favour of the solar (Tropical) year, which continued in use until 1582 CE, when it was replaced by the Gregorian Calendar.
