Join us as we take a detailed walk-through of the planning and installation of our 3kW - 5kWH - 120V off-grid solar system that powers a rehabbed shipping container! Hi there, we're Jonathan & Ashley from Tiny Shiny Home. Our family of 6 spent many years traveling full-time in our renovated vintage.

If you're considering DIY solar, starting with a small off-grid system, such as a ground-mounted or portable unit, is significantly safer and more manageable than installing a full rooftop or grid-tied system. Building a small off-grid system has become more straightforward thanks to advances in.

Whether you're preparing for a more sustainable lifestyle, reducing your reliance on the grid, or just powering a cabin or van, building your own solar system can be incredibly rewarding. In this guide, we'll walk through the entire process, step by step, with clear language and practical tips—no.

In this video, we upgrade a remote cabin from a small DIY setup to a full off-grid solar system using the EG4 6000XP inverter, EG4 Server Rack Batteries, and a 3kW solar array on a Chico Ground Mount. We cover everything from transporting gear to wiring, mounting panels, and getting reliable 240V.

An off grid solar system provides complete energy independence by generating and storing electricity without any connection to the traditional power grid. As we move through 2025, technological advances and decreasing costs have made off-grid solar more accessible than ever, offering homeowners.
