TOPCon cell efficiency for spot price report will be adjusted to 24.7%+ from April 2024 onwards. TOPCon 210\*210mm cells will be included from June 19,2024. Prices for TOPCon cells will be based on an efficiency of 24.9%+ from August 14,2024. Prices for TOPCon cells will be based on a 25.0%+.

In a new weekly update for pv magazine, OPIS, a Dow Jones company, provides a quick look at the main price trends in the global PV industry. From pv magazine Global U.S.: The spot price for TOPCon utility-scale modules DDP US was stable this week at \$0.279/W. The spot price for Mono PERC 400 W.

Component Quality Drives Long-Term Value: While premium components like monocrystalline panels and MPPT charge controllers cost 10-15% more upfront, their superior efficiency (15-24% vs 13-17%) and longer lifespans (25-30 years) often provide better return on investment, especially in.

First, the good news: Early this year, module prices have remained stable across high-efficiency products and other typologies. Even modules with a fully black appearance (Full Black), reintroduced in the price index in January, are seeing minimal price movement. The upward trends in lower price.

Accurate, trusted price assessments for solar panel components is more vital than ever before. From upstream polysilicon, wafers and cells, to downstream panel prices, OPIS Global Solar Markets keeps you updated on solar price trends and forward prices. It is the first solar materials price report.

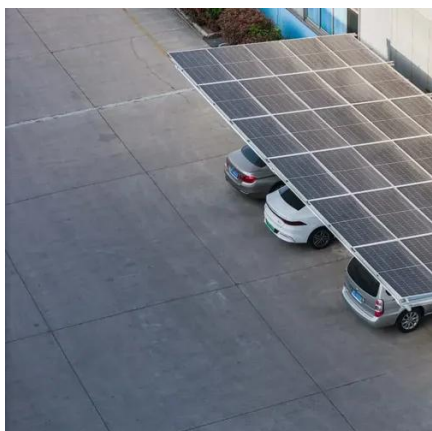

Each year, the U.S. Department of Energy (DOE) Solar Energy Technologies Office (SETO) and its national laboratory partners analyze cost data for U.S. solar photovoltaic (PV) systems to develop cost benchmarks. These benchmarks help

measure progress toward goals for reducing solar electricity costs.
