

Tripoli oil platform using inverter cabinetized mobile

Overview

The present invention relates to a mobile offshore oil drilling and production platform (10) that allows a field operator to cope with uncertainty and economically develop a small or marginal oil field typically located in a remote location.

Modular MOPU is an energy technology company delivering modular offshore production solutions that unlock high-return deepwater opportunities by repurposing existing offshore assets into Mobile Offshore Production Units. Built on dynamically positioned Mobile Offshore Drilling Units (MODUs), each.

GPS is a market leader in the provision of Mobile Offshore Production Units (MOPUs) for the Upstream Oil & Gas sector. GPS has extensive experience in the conversion of Jack-up Drilling, including all marine/hull and topsides systems, into oil and gas MOPUs. MOPUs can be configured expeditiously.

Mobile offshore production units, or MOPUs, refer to offshore platforms and systems, including wellbay modules, spar and tension decks and jack-ups. They are a versatile and advanced solution to low cost field development, perfect for exploring new or marginal fields. Why choose us for mobile.

A key element in the oil production process on offshore platforms is the equipment that ensures the technological operation of the submersible unit, specifically the frequency drive and related transformers (step-down and step-up transformers). The equipment has high standards, such as: - low input.

That's what makes an Aggreko mobile substation rental the perfect solution. They help your projects come to life in areas with limited or no power, or when maintenance and emergencies take out your power supply. And, in the process, our mobile substations help you take control of costs, maintain.

Mobile Offshore Production Units (MOPU) converted from existing self-elevating

unit (SEU) are often considered for shallow water production fields. They offer opportunities for fast-track development in comparison to new construction of fixed jackets and are typically able to be deployed on site.
