

Uruguayan companies invest in energy storage projects

Overview

What is Uruguay's energy strategy?

In 2005, Uruguay initiated a dramatic shift in its energy strategy, moving from petroleum-based electricity generation to renewable sources. In 2024, Uruguay generated 99 percent of its electricity from renewable sources using hydropower (42 percent), wind (28 percent), and biomass (26 percent).

Should Uruguay transition to renewables?

Since 2019, energy has become a significant export for Uruguay, with some years bringing in hundreds of millions of dollars in revenue. In most of the world, when anyone mentions the need to transition to renewables, climate change dominates the public discussion.

How does Uruguay get its electricity?

To this day, Uruguay continues to rely heavily on its dams, including the imposing Salto Grande on the Río Uruguay, whose power is shared with Argentina, and several on the Río Negro. For decades, electricity from those dams and from generators running on gas and oil imported largely from Argentina and Brazil met Uruguayans' energy needs.

What is the oil and gas industry like in Uruguay?

Uruguay's oil and gas sector is relatively underdeveloped, as the country does not produce hydrocarbons domestically and relies entirely on imports to meet its fossil fuel needs. State-owned ANCAP (Administración Nacional de Combustibles, Alcohol y Portland) oversees the sector, managing imports, refining, storage, and distribution of fuels.

Uruguayan companies invest in energy storage projects

[Uruguayan energy storage companies](#)
